                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3 TCATTAATGAA 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          rural areas. Uncultured PBMC DNA was PCR amplified, and the recombinant clones were manually sequenced. Another portion of the cells was used for virus isolation.

Patient 7924 was a heterosexual 48-year old teacher from Guinea Bissau, who was living in the Washington, D.C. area. Originally he lived in an urban area in West Africa before traveling extensively and coming to the United States. After seeking medical care for a STD, patient 7924 was identified as HIV-2 positive. Subsequent Western blot analysis of peripheral blood cells showed HIV dual reactivity. Virus isolation was successfully performed at the University of Alabama at Birmingham. Sample 7924A clusters with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cultured isolates. Since cultivation may select against viruses which can not grow in a particular cell type, Gao et al. argue that a greater variation may be elucidated by sequencing virus obtained from uncultured PBMCs. With this aim in mind, peripheral blood samples were collected from 12 HIV-2 seropositive patients (2238, 60415K, 6067K, 7312A, 7810A, 7924A, FA, F0784, FT, JA, ON, and PA) from six different West African countries, living in both urban and trural areas. Uncultured PBMC DNA was PCR amplified, and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human immunodeficiency virus type 2 PCR-amplified DNA recovered from a 48 year old heterosexual male originally from urban Guinea Bissau who showed HIV dual seroreactivity.

Human immunodeficiency virus type 2

Viridae; ss-RNA enveloped viruses; Positive strand RNA virus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HIV27924A1 781 bp ds-DNA VRL 23-AUG-1994 Human immunodeficiency virus type 2 (HIV-2) p16/p28 gag seque sample 7924A, clone 1, partial cds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence was obtained as part of a study designed to determine the in vivo extent of HIV-2 genetic and biological variation. Up to now, HIV-2 sequences have been derived almost solely from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      approximately 304 bp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  biology

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13 TTCATTAATGAAG
SIVAGMTYO appears to lack a vpR coding region. [1] suggests that this may account for SIVAGMTYO's lack of pathogenicity. The env cds contains an in-frame stop codon at positions 8077-8079, similar to the in-frame stop codons found in the SIV macague and HIV-2 ROD35 envelope coding regions, except that SIVAGMTYO's stop codon
                                                                                                                                                                                                      Fukasawa,M., Miura,T., Hasegawa,A., Morikawa,S., Tsujimoto,H., Miki,K., Kitamura,T. and Hayami,M.
Sequence of simian immunodeficiency virus from African green monkey, a new member of HIV/SIV group
Nature 333, 457-461 (1988)
                                                                                                                                                                                                                                                                                                                                                                                                                                   SIVAGMTYO 9170 bp ss-RNA VRL 01-MAR-1989 Simian (African green monkey) immunodeficiency virus, isolate TYO-1, complete genome.
                                                                                                                                                                                                                                                                                                                                                                 Simian (African green monkey) immunodeficiency virus, extra-
chromosomal closed-circular DNA, TYO-1 clone lambda-SAH12.
                                                                                                                                                              This sequence was obtained from a lambda clone derived from
                                                                                                                                                                                                                                                                                                                                                                                                                   X07805

Description

Pred. No.

Statistics:

Mean

5.030;

Variance 2.946;

scale 1.708

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                            This sequence encodes a Staphylococcus aureus protein of unknown function, and represents a DNA Sequence of the invention.

The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial polypeptides. Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. bylori infection.

the recombinant production of the polypeptide. Agonists or the Murc expression of the polypeptide. Antagonists, inhibitory nucleic acid or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide or expression of the polypeptide are useful for inhibiting the polypeptide e.g. bacterial (especially S. aureus) infections. They are also useful against Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agentification useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The Murc polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to identify modulators or specific receptors; in rational drug design and as an immunogen for vaccines. The Murc gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant Murc gene; for othermosomal mapping; to determine bacterial serotype; and for genetic immunisation. The present sequence represents a partial nucleotide sequence (Murc Ora) of the Murc gene.

Host CC cell containing an expression system comprising the MurC gene can be used CC for the recombinant production of the polypeptide. Agonists or the MurC CC polypeptide are used to treat conditions requiring increased activity or CC expression of the polypeptide. Antagonists, inhibitory nucleic acid or CC competitive polypeptide are useful for inhibiting the polypeptide e.g. CC bacterial (especially S. aureus) infections. They are also useful against CC the incobacter pylori infections and related cancers, ulcers and gastritis. CC The antibacterial agents are useful to treat in-dwelling devices for CC infection prevention or generally as wound treatments to prevent adhesion CC diagnosing or prognosing a (susceptibility to) disease, for raising CC drug design and as an immunogen for vaccines. The MurC gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant MurC gene; for chromosomal mapping; to determine bacterial serotype; and for genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                        Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

Claim 3: Page 14: 23pp; English.
Oligonucleotide probe MK14-A consists of nucleotides (Q51735). It hybridized to all spp. of mycobacteria cross reacted to a few non-mycobacterial spp. The pr be useful as an initial screen for mycobacterial infe see also Q51735-45 and Q51747-59.
See also Q51735-45 and Q51747-59.

                                       anti-S.aureus vaccines
Claim 1; Page 1287-1288; 3271pp; English.
This sequence represents one of 5191 Staphylococcus aureus DNA sequences
of the invention. The DNA sequences are recorded on a computer readable
medium, preferably selected from a floppy or hard disk, random access
memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using
the S.aureus DNA sequences allows putative functions to be assigned so
that protein-encoding or regulatory regions of commercial, therapeutic or
industrial importance can be obtained. Specifically, sequences which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 93-378844/48.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             surgical wound infections, food poisoning, osteomyelitis, syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating computer readable medium.

Sequence 2424 BP; 839 A; 302 C: 1500 poisoning, osteomyelitis, osteomythis are useful as primers or probes for isolating computer readable medium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a Staphylococcus aureus protein of unknown function: The present sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense sequence to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The encoded protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.

This fragment is also found to act as a salt-inducible promoter (SIP). Using this SIP, salt can be used as a food-grade inducer in food fermentation processes, e.g. in the production of cheese, dressings, water-containing spreads, sausages, or sour dough.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    T89885-92) and are considered to be Wnt receptors. Wnt receptors can be used in a novel, claimed method of screening for compounds which modulate the binding of a Wnt polypeptide (secreted proteins involved in cell-to-cell signalling) to a Wnt receptor. Wnt is involved in (mammary) cancer and other processes involving growth, development and proliferation (both normal and abnormal). Modulators identified by the claimed method are useful for treatment of diseases related to these conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 29-30; 61pp; English.

This sequence comprises novel Caenorhabditis frizzled gene 1 (CfZ1) that encodes a putative transmembrane receptor, frizzled-1 (see W31269), a Wnt receptor (WntR). Novel frizzled family members have been identified in Drosophila, mouse, human and Caenorhabditis (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Key

This is the sequence of plasmid pxlpx. The plasmid can be use transform Zymomonas cells. The transformants can be cultured express the xyla/B genes. Alcohol production from such transformants is comparable to that from yeast.
                                                                                                                                                                                                                                                                                                                             P-PSDB; R22720:
Vector for expression of heterogenes in
used for expression of xylose isomerase

Soluble recombinant forms of Borrelia lipo:proteins - useful for Vaccine prodn. for treatment of Lyme disease Example 9: Column 41-42; 49pp; English.

This sequence represents the coding sequence for a soluble recombinant Borrelia variable major protein 7 (0sp7) variant protein of the invention. Borrelia spirochetes are responsible for a variety of human disorders including Lyme borreliosis, and relapsing fevers. The spirochete is transmitted to humans and animals through the bite of a spirochete is transmitted to humans and animals through the bite of a spirochete is transmitted to humans and animals through the bite of a spirochete is transmitted to humans and animals through the bite of a spirochete is remained to the spirochete is transmitted to humans and animals through the bite of a spirochete is remained to the spirochete is transmitted to humans and animals through the bite of a spirochete is remained to the spirochete is remained to the spirochete is transmitted to humans and animals through the bite of a spirochete is remained to the spirochete is transmitted to humans and animals through the bite of a spirochete is remained to the spirochete is transmitted to humans and animals through the bite of a spirochete is remained to the spirochete is spirochete is spirochete is spirochete in the spirochete is spirochete is spirochete is spirochete is spirochete is spirochete in the spirochete is                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       08-SEP-1992; 941523.

                                                                                                                                           Application of optimised gene expression - for scientific, industrial and therapeutic purposes Disclosure; Fig 13; 110pp; French.

Alterations were made to the TATA box sequence of the human and mouse GM-CSF genes (see Q55627 and Q55628, respectively) and the effects of the various alterations on gene expression were measured. Results indicated that resonances of the LFF type are most strongly affected by changes in the TATA box; it was further shown that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 other pathogenic disorders in an infected host. This sequence is used to create recombinant host cells, and the encoded Vmp7 protein can be isolated from the cytosol of one of these cells without the use of detergent. The encoded recombinant proteins can be used as antigens for the production of vaccines against Lyme disease. The recombinant proteins can also be used in immunoassays and other diagnostic screening methods to detect the presence of antibodies against Borrelia lipoproteins in the sera of infected pattents.

Tabular output not generated. Run on: Wed Nov 24 02:32:46 1999; MasPar time 4.78 Seconds 674.763 Million cell updates/sec

Perfect Score: N.A. Sequence: Description: >US-09-103-287-5 (1-19) from US09103287.seq 95

1 CTTCATTAATGAACGATGC 19 GAAGTAATTACTTGCTACG

Scoring table: TABLE bktranslate2 Gap 40

Nmatch STD : Dbase 0; Query 0

Searched: 77977 seqs, 84804879 bases x 2

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37

1:swissprot

Statistics: Mean 40.305; Variance 47.014; scale 0.857

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-i- FUNCTION: MATURE VIRUSES ARE OCCLUDED INTO THE ATI, AND IT HAS
BEEN ASSUMED THAT SUCH BODIES PROTECT THE VIRUS DURING

DISSEMINATION FROM ANIMAL TO ANIMAL.

-i- A CHARACTERISTIC FEATURE OF ATI IS THE FORMATION OF LARGE MASSES

WITH NO SURROUNDING MEMBRANES IN THE CYTOPLASM OF INFECTED CELLS

WITH NO SURROUNDING MEMBRANES IN THE CYTOPLASM OF INFECTED CELLS

-i- SIMILARITY: TO COMPOX VIRUS A-TYPE INCLUSION PROTEIN C-TERMINUS.
